SUMMARY

Software Engineer with experience designing and developing enterprise applications using Java, Spring Boot, Microservices, React.js, PostgreSQL, Kafka, and AWS. Proven expertise in building scalable REST APIs, event-driven architectures, cloud-native services, and full-stack web applications. Strong background in insurance domain application development, database optimization, CI/CD automation, and production support. Master's degree in Computer Science with a passion for building secure, scalable, and high-performance software solutions.

SKILLS

Programming Languages: Java 21, Java 17, Java 11, Java 8, TypeScript, JavaScript (ES6+), Python, SQL, C, C++

Backend Technologies: Spring Boot, Spring Cloud, Spring MVC, Spring Security, Spring Data JPA, Hibernate, Spring Batch, Spring JDBC, Spring WebFlux, Microservices, REST APIs, GraphQL, SOAP Web Services, JUnit, Mockito

Frontend Technologies: React.js, Angular 17, TypeScript, Redux, HTML5, CSS3, Bootstrap, jQuery, jQuery UI, DataTables

Databases: Oracle 19c, Oracle 12c, PostgreSQL, MySQL, SQL, PL/SQL

Messaging & Streaming: Apache Kafka, RabbitMQ

Cloud & DevOps: AWS (EKS, EC2, Lambda, API Gateway, RDS, Cognito, MSK, CloudWatch, S3), Docker, Kubernetes, Jenkins, GitHub Actions, CI/CD

Architecture & Design: Microservices Architecture, Event-Driven Architecture, Distributed Systems, Design Patterns, API Design, System Integration, Domain-Driven Design (DDD), Enterprise Integration Patterns, Service-Oriented Architecture (SOA)

Security: Spring Security, OAuth2, JWT, CyberArk, Secure Credential Management

Tools: Git, Maven, Gradle, Postman, Swagger/OpenAPI, Splunk, Jira, Eclipse IDE, JBoss Developer Studio, Log4j

Methodologies: Agile/Scrum, SDLC, Test-Driven Development (TDD), Code Reviews

Data Science & AI: Machine Learning, Generative AI, Predictive Analytics, Pandas, NumPy, Scikit-learn, Jupyter Notebook

WORK EXPERIENCE

Full Stack Java Developer
Saayam For All

Mar 2026 - Present

- Developed cloud-native microservices for volunteer management, request processing, analytics, and workflow automation using Java 21, Spring Boot 3, PostgreSQL, Apache Kafka, and AWS services.
- Designed and developed 20+ RESTful APIs enabling secure communication between frontend applications, backend services, and third-party integrations.
- Built responsive React.js and TypeScript dashboards supporting volunteer onboarding, request tracking, analytics reporting, and administrative operations.
- Implemented Spring Data JPA and PostgreSQL database models to manage volunteer profiles, service requests, audit records, and operational datasets.
- Integrated Apache Kafka event-driven workflows for asynchronous request processing, notification delivery, and real-time status updates across distributed services.
- Developed role-based authentication and authorization using Spring Security, JWT, and AWS Cognito to secure user access and application resources.
- Optimized API and database interactions through query tuning, indexing strategies, and caching techniques, improving application responsiveness and scalability.
- Created reusable service components and exception-handling frameworks following microservices and domain-driven design principles.
- Implemented automated unit and integration testing using JUnit 5 and Mockito, improving code quality

and reducing regression defects.

- Containerized applications using Docker and deployed microservices to Kubernetes clusters running on AWS EKS.
- Configured CI/CD pipelines using GitHub Actions and Jenkins to automate build validation, testing, and deployment workflows.
- Integrated AWS services including API Gateway, Lambda, Cognito, MSK, RDS, and CloudWatch to support scalable cloud-native application operations.
- Monitored production environments using CloudWatch dashboards, application logs, and performance metrics to proactively identify and resolve issues.
- Collaborated in Agile/Scrum teams, participating in sprint planning, code reviews, backlog refinement, and release activities.

Tech Stack: Java 21, Spring Boot 3, Spring Security, Spring Data JPA, React.js, TypeScript, PostgreSQL, Apache Kafka, REST APIs, JUnit 5, Mockito, Docker, Kubernetes, AWS EKS, AWS Lambda, AWS API Gateway, AWS Cognito, AWS MSK, AWS RDS, AWS CloudWatch, GitHub Actions, Jenkins, Git

Software Engineer

Apr 2025 - Feb 2026

Westcliff University, Irvine

- Designed and developed a full-stack Academic Project Management System supporting project discovery, assignment submissions, workflow management, and automated notifications for students and faculty.
- Developed scalable backend microservices using Java, Spring Boot, Spring Data JPA, Spring WebFlux, and Hibernate to manage project information, user workflows, assignment processing, and notification services.
- Designed and implemented RESTful APIs enabling secure communication between Angular-based frontend applications and backend services.
- Built responsive user interfaces using Angular 17, TypeScript, HTML5, CSS3, and Bootstrap, improving usability and user engagement.
- Implemented reactive programming patterns using Spring WebFlux to support asynchronous request processing and improve application responsiveness.
- Developed automated email notification services that delivered assignment reminders, deadline alerts, and status updates using AWS SES and AWS Lambda.
- Designed PostgreSQL database schemas, relationships, indexes, and queries to support project management, user administration, assignment tracking, and notification history.
- Integrated AWS services including Amazon RDS, AWS Lambda, Amazon SES, and CloudWatch to support cloud-native deployment, monitoring, and serverless processing.
- Containerized application components using Docker and applied microservices architecture principles to improve scalability, maintainability, and deployment consistency.
- Implemented exception handling, validation frameworks, and logging mechanisms to improve system reliability and troubleshooting efficiency.
- Developed unit and integration test cases using JUnit and Mockito, improving code quality and reducing regression issues.
- Participated in Agile development practices including sprint planning, code reviews, backlog grooming, and iterative feature delivery.
- Monitored application performance and operational metrics using AWS CloudWatch to identify bottlenecks and support proactive issue resolution.
- Collaborated with faculty stakeholders to gather requirements, translate business needs into technical solutions, and deliver application enhancements.

Tech Stack: Java, Spring Boot, Spring WebFlux, Spring Data JPA, Hibernate, Angular 17, TypeScript, PostgreSQL, REST APIs, JUnit, Mockito, AWS Lambda, Amazon RDS, Amazon SES, AWS CloudWatch, Docker, Microservices, Git

Custom Software Engineer
Accenture, Hyderabad, India

Oct 2021 - Aug 2023

- Developed and maintained enterprise insurance claim management capabilities supporting STD, LTD, and Life insurance workflows.
- Designed and implemented Spring Boot microservices to support scalable claims processing and policy workflow services.
- Developed and maintained 25+ RESTful APIs supporting insurance claims processing and policy servicing workflows.
- Automated document generation workflows using Oracle Documaker, reducing manual processing effort and improving document consistency.
- Implemented core business logic using Java, Spring Framework, and Hibernate ORM, supporting maintainable and testable services.
- Optimized Oracle SQL queries, indexes, and stored procedures, reducing API response times by up to 40%.
- Developed and consumed SOAP-based web services using WSDL contracts for integration with policy administration, claims, and document management systems while ensuring reliable enterprise system communication.
- Developed high-volume batch processing jobs using Spring Batch and Spring JDBC to validate, transform, and process insurance claims data, improving operational efficiency and reducing manual intervention.
- Implemented secure credential handling with CyberArk, eliminating hardcoded secrets and improving security posture.
- Implemented Apache Kafka based asynchronous processing, reducing system dependency bottlenecks and improving throughput for claims workflows.
- Built and maintained CI/CD pipelines using GitLab, Jenkins, and Gradle, supporting repeatable releases and automated testing.
- Investigated and resolved production issues using Splunk, reducing service downtime and ensuring SLA compliance.
- Performed data analysis and reporting on insurance claims datasets to identify processing bottlenecks, improve operational efficiency, and support business decision making.
- Deployed and supported enterprise applications on Apache Tomcat and JBOSS Application Server environments, assisting with application configuration, troubleshooting, and release activities.
- Developed responsive UI components using HTML5, CSS3, Bootstrap, jQuery, jQuery UI, and DataTables for claims processing applications.
- Created and optimized Oracle 12c PL/SQL packages, functions, stored procedures, and SQL queries supporting enterprise insurance workflows.
- Used Eclipse IDE and JBoss Developer Studio for development, debugging, and deployment activities.

Tech Stack: Java, Spring Boot, Spring Framework, Spring Batch, Spring JDBC, Hibernate, REST APIs, SOAP Web Services, WSDL, Oracle Database, Kafka, CyberArk, Splunk, GitLab, Jenkins, Gradle, JBOSS, Apache Tomcat, Jira

Junior Software Developer

Jan 2021- Aug 2021

ACL Digital, Bengaluru, India

- Developed an Employee Referral Portal using Java, Spring MVC, and MySQL to support employee referral tracking, candidate management, and recruitment workflow automation.
- Designed and implemented service-layer components, business logic, and REST-style controllers following object-oriented design principles and MVC architecture.
- Developed responsive user interfaces using HTML5, CSS3, JavaScript, and Bootstrap, improving user experience and data accessibility.
- Implemented CRUD operations, form validation, and backend integrations to manage employee referrals, candidate profiles, and application status tracking.
- Designed database schemas and optimized SQL queries to improve data retrieval efficiency and application performance.
- Integrated backend modules with relational databases using JDBC and Spring data access components.
- Participated in debugging, defect resolution, and code optimization activities to improve application stability and maintainability.

- Collaborated with senior developers during code reviews and followed Git-based version control practices for source code management.
- Created unit test cases and supported functional testing activities to validate application behavior and business requirements.
- Worked in Agile/Scrum development environments, participating in sprint planning, daily stand-ups, backlog discussions, and sprint reviews.
- Assisted in deployment preparation, release validation, and production support activities under senior developer guidance.

Tech Stack: Java, Spring MVC, JDBC, HTML5, CSS3, JavaScript, Bootstrap, MySQL, SQL, Git, Agile/Scrum

PROJECTS

Real time Notification Microservice - Java, SpringBoot, RabbitMQ, JPA, Docker

- Designed an event driven notification service capable of processing thousands of asynchronous notification requests efficiently using RabbitMQ.
- Implemented an end-to-end flow with React UI, REST APIs, and audit-ready database records, enabling faster troubleshooting and full traceability of notifications.

Encrypted Password Storage & Retrieval System - Java, SpringBoot, JPA

- Developed a Spring Boot based secure password storage system using AES encryption, user level salt, and a global pepper key, achieving encrypted data persistence and enhancing credential security.
- Implemented an end to end flow with a Thymeleaf UI, REST endpoints, and timestamped DB entries, improving data retrieval and ensuring fully traceable, audit ready access.

Machine Learning Based DDoS Attack Detection using Recurrent Neural Networks (RNN)

- Developed an RNN based DDoS detection system that analyzes real time network traffic and identifies malicious patterns with 95%+ detection accuracy, significantly improving early threat identification.
- Designed a scalable detection workflow capable of processing high volume network traffic in real time.

CERTIFICATIONS

AWS Certified Cloud Practitioner

May 2023

Amazon Web Services

Competitive Programming Data Structures & Algorithms

Jan 2021

GeeksForGeeks

NPTEL - Java Programming, SQL Programming

Mar 2020

IIT

EDUCATION

Master of Science in Computer Science

Mar 2026

Westcliff University, Irvine, GPA: 3.92 out of 4

Bachelors in Computer Science

July 2021

Sri Vasavi Engineering College, India, GPA: 8.3 out of 10
